About us

Atlas Paint Brushes & Tools (Pincéis Atlas S/A) is an industry established in 1966 and located in the south of Brazil, in one of the regions with the highest levels of infrastructure and living standards. The factory employs and invests on an ongoing basis in progressive state-of-the-art technology.

Our staff is highly skilled and motivated. The result is a comprehensive, cohesive and competitive range of excellent quality products - backed and supported by the Atlas team's total commitment and dedication to efficiency and service.

These attributes, coupled with an efficient transport and communication system, have made Atlas one of the world's largest international manufacturers, successfully exporting to more than 75 countries worldwide.

Our products

Painting is not only a combination of a coat and a paint brush or paint roller. Atlas, and every skilled professional, knows this. We're committed to offer a full range of products that satisfy every need of both DIY and professional painting.

Having two production plants, and highly skilled employees, we're capable of producing thousands of paint brushes, rollers and accessories per day, thus reducing our costs and offering profitable opportunities to our business partners.

Our products are developed to work together, and this translates into performance, high durability and fair prices.

Paint brushes

One of the cores of painting. So it must be properly done – and we know how.

Atlas is one of the few companies in the world to use the Monoblock System. What is it, and how does it change the game?

This is a manufacturing method, that fixes the bristles directly to the handle with epoxy glue. This makes the paint brush one strong unit, durable and resistant to solvents. Also, bristle loss is highly reduced.

A solid polypropylene handle provides the paint brush a no rotting, no molding, long lasting and solvent resistant body.

Paint rollers

They get the job done quick and are suitable to almost any kind of surface, but the quality of the paint job is directly related to the quality of the paint roller. Our paint rollers have what it takes.

Our paint rollers are produced under the Thermo Bound System, which is based on the heating and cooling of the roller core, in order to fix the fibre onto it.

By having no chemical adhesives in the process, our rollers, as well as our paint brushes, can be used with any kind of paint – including solvent based ones.

Tools and accessories

Football teams are not, or at least should not, be composed of only one or two players. When it comes to painting, we are proud to have a full skilled team on the pitch.

In order to get the job done properly, the painter needs a paint tray, extension pole, masking tape, gloves, etc. Of course, not before the surface has been properly prepared and cleaned. If there are cracks, we have the fillers. If there's an old coat, it's time for scraper knives or wire brushes – the point is, if a tool is needed, we have it.

And, then again, our products work together. But what exactly does it mean? For example, all extension poles will have the same thread, which means they will work with all our roller frames. And all our roller sleeves (36mm) will work with all our roller frames of 36mm.

Faux finish

Who said art belongs to museums only? Faux finish is the way out of plane, regular finished wall.

There are no rules in this game, except that the finish has to be good. With a wide variety of tools, creative and stylish finishes are guaranteed.

Anyone who's already applied putty knows how hard it is, and for this reason, wants it to be done only once. Here our tools play an important role, and in a beautiful way.

Paint sets

DIY is becoming more and more popular. It is not unusual to have non-professional “painters” doing quick or small jobs at home. But this does not mean the tools don’t to be professional – it is quite the opposite.

The less skilled a painter is, the better the tools need to be, as less effort is required. Our paint sets come in different configurations, each designed to meet different everyday needs.

Also, the paint sets are composed by the same “regular” professional tools bought separately. That means a roller frame from a paint set can later be used with another roller sleeve.

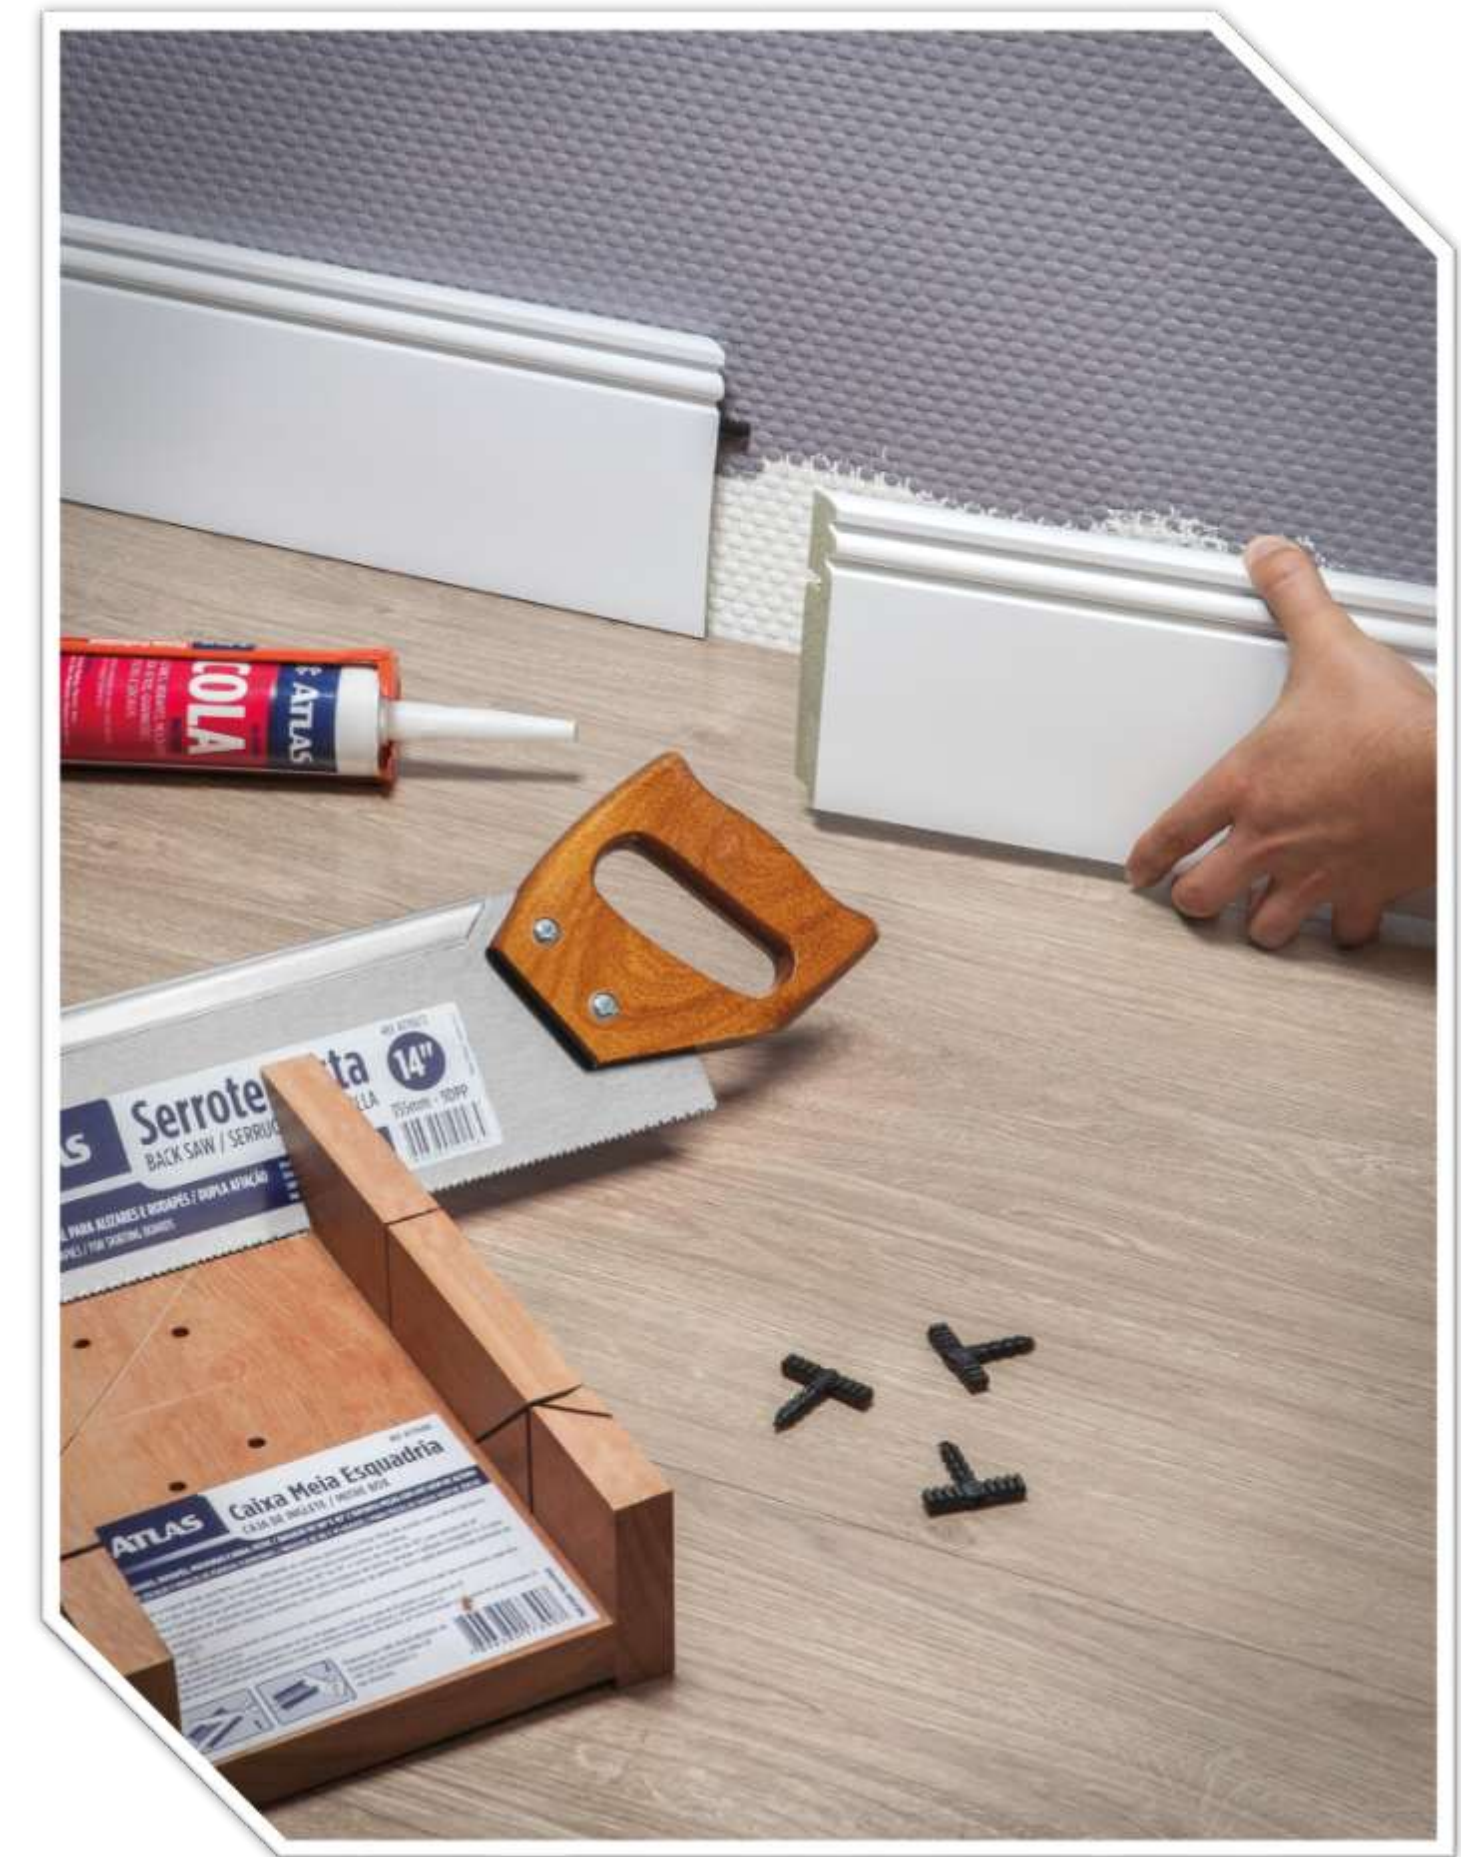

Skirtings boards

The finishing of walls is not just about coat – there's still the bottom, where the wall meets the floor. As for tiles used on stairs, they also require finishing.

Our recycled polystyrene skirting board are not just environment-friendly – they also look good, and are easy to install.

No mould, no rotting, no shrinking or warping, no worries. When the time comes, washing is welcome without risk to the product.

Also, if the white is not suitable to the colour of wall or floor, they are also ready to paint.

Cleaning tools

Every paint job is followed by dust or debris. It is part of a job well done, delivering the premises in good shape. Thinking of that, we also offer a very good range of cleaning tools.

It doesn't matter if the job was done inside our outside, from delicate floor brooms to patio, heavy duty ones, Atlas is there for the painter. Dustpans and squeegees are also in line to serve.

Thank you!
